DECODE THE ENGINE OIL MYSTERY

Not all engine oil is created equal. Counterfeits lurk in the shadows, threatening your engine's health. Be a savvy driver! Knowledge is power! Protect your engine from the dangers of fake oil with these simple tips.

Genuine engine oils are usually golden and transparent, free of impurities, sediments and suspended matters of all kind. Fake oil is usually much darker and repeated use will make it less uniform in appearance.

New oil does not have any special smell while fake oil often has a suffocating and pungent smell. If the engine oil has a burnt smell when you open the packaging, it is most probably counterfeit.

FEEL

Fake engine oil is often thick and full of impurities and sediments. Its turbulent flow is also poor and is not as delicate to the touch when compared to its legitimate counterparts.

PACKAGING

Make sure the packaging does not have strange inscriptions on it. The labels and caps of the oil containers must match the original ones to the last detail.

Choose Genuine!
